

PubAff 809: Introduction to Energy Analysis and Policy

Fall, 2009

University of Wisconsin

La Follette School of Public Affairs

EnvSt-809, PubAff-809, URPL-809

3 credits

Room: 175 Science Hall

Tue., Thu. 4:00–5:15p

Webpage: Learn@UW

INSTRUCTOR

Professor Greg Nemet

La Follette School of Public Affairs and Nelson Institute for Environmental Studies

209 Observatory Hill Office Bldg.

nemet@wisc.edu

Office hours, Fall 2009: Tuesday 1–3 pm, 209 La Follette

COURSE DESCRIPTION AND OBJECTIVES

Heightened concern about both the availability of energy resources and their environmental impacts has increased demand for leaders and analysts who can navigate the political, economic, scientific, and technological dimensions of these issues to inform critical policy decisions. Few are able to do so; and those who can provide valuable insight. In this course, you will develop an understanding of the dynamics of the global energy system, focusing on ways that public policy can affect these changes in societally beneficial directions. The perspective taken is that of a policy maker confronting decisions about the design and implementation of energy policy. The goal of this course is for you to master a set of simple tools that will enable you to independently analyze problems, and be able to critically assess the work of others.

Students will become familiar with the breadth of energy-related problems at stake through development of methods, tools, and perspectives to analyze them. Topics covered span the full life cycle of energy production and use, including: material extraction, energy conversion, power generation, energy transportation, end use, and environmental impacts. The class surveys the types of energy used historically—from traditional biomass, to coal, to natural gas, to nuclear and renewables, as well as the increasingly diverse possibilities for future use discussed in current policy debates. Coverage also includes a historical review of regulation and policy in the energy industry. The geographic scope is international.

The field of energy analysis and policy is inherently interdisciplinary. As such the class draws on a set of tools and perspectives derived from multiple disciplines, and includes students from diverse backgrounds. While students are welcome to take this course alone, this course is the introductory seminar for the *Energy Analysis and Policy* certificate program and as such provides preparation for subsequent courses in the program.

REQUIREMENTS

The reading load for this class is not heavy; students are expected to read the required texts before class and participate actively in class discussions. Four problem sets will help develop analytical tools and methods. There will be a midterm exam and a final exam, both of which will include qualitative and quantitative questions.

EVALUATION

- 5% Class participation.
- 40% Four problem sets.
- 25% Midterm exam.
- 30% Final exam.

READINGS

There are two required books for this course, which are available at the UW Bookstore:

- Chick, M. (2009). *Electricity and Energy Policy in Britain, France and the United States Since 1945*. Cheltenham, UK, Edward Elgar.
- Rubin, E. S. (2001). *Introduction to Engineering and the Environment*. Boston, McGraw-Hill.

All other readings are available on the Learn@UW website.

INSTRUCTOR'S BIO

Gregory Nemet is an assistant professor at the University of Wisconsin in the Nelson Institute for Environmental Studies and in the La Follette School of Public Affairs. He is also a member of the university's Energy Sources and Policy Cluster and a senior fellow at the Center for World Affairs and the Global Economy. His research and teaching focus on improving understanding of the environmental, social, economic, and technical dynamics of the global energy system. He teaches courses in international environmental policy and energy systems analysis. A central focus of his research involves empirical analysis of the process of innovation and technological change. He is particularly interested in how the outcomes of this line of research can inform public policy related to improvements in low-carbon energy technologies. His work is motivated by a more general interest in issues related to energy and the environment, including how government actions can expand access to energy services while reducing their environmental impacts. He is currently a Lead Author of the *Global Energy Assessment*. He holds a masters degree and doctorate in energy and resources, both from the University of California, Berkeley. His undergraduate degree from Dartmouth College is in geography and economics.

Class Schedule and Reading List

1) September 3:

Cheap, clean, and reliable: three energy policy challenges

- Nixon, R. M. (1974). State of the Union Address. Washington, D.C.
- Obama, B. (2009). Remarks by the President on Energy (6/29/09).
- Holdren, J. P. (2001). “Meeting the energy challenge.” *Science* 291(5506): 945-945.

optional:

- Carter, J. (1979). The “Crisis of Confidence” Speech.
- Gore, A. (2008). Energy Speech: “A Generational Challenge to Repower America”.

2) September 8:

Historical development of the production and use of energy

- Chick, M. (2009). *Electricity and Energy Policy in Britain, France and the United States Since 1945*. Cheltenham, UK, Edward Elgar, Ch. 1.
- Chick, Ch. 2.
- Smil, V. (2000). “Energy in the twentieth century: resources, conversions, costs, uses, and consequences.” *Annual Review of Energy and Environment* 25: 21-51.

optional:

- Fouquet, R. and P. J. G. Pearson (1998). “A thousand years of energy use in the United Kingdom.” *The Energy Journal* 19(4): 1-41.

3) September 10:

EAP Tools 1: Units, magnitudes, and rates of change

- Koomey, J. G. (2001). *Turning Numbers into Knowledge*. Oakland, CA, Analytics Press, pp 125–141.
- Norgaard (1996) “About calculations and unit conversions.”
- Holdren, Harte, and Koomey, “Constants and conversions.”
- Rubin 681–683

optional:

- Lovins, A. B. (1976). “Energy Strategy: The Road Not Taken?” *Foreign Affairs* 55(1): 65-96.

4) September 15:

EAP Tools 2 : Combustion

- Rubin, Ch 1
- Rubin, Ch 2

- Masters, G. (1991). Introduction to Environmental Engineering and Science. New Jersey, Prentice Hall: 39–47.

recommended:

- Swartz, C. E. (1993). Used Math for the First Two Years of College Science, American Association of Physics Teachers. [Ch 1 and 2]

Problem set #1 handed out

5) September 17:

Energy and development

- Bose, S. (1993). Chapter 5. Women, Work, and Household Electrification in Rural India. Bombay, Oxford University Press: 143–181.
- IEA (2002). Energy and Poverty. World Energy Outlook 2002. Paris, International Energy Agency (2002).
- Asaduzzaman, M., D. F. Barnes, et al. (2009). Restoring Balance: Bangladesh's Rural Energy Realities. Washington, The World Bank. [Read: Executive Summary and Chapter 2]
- Rubin 15.4, 15.5

optional:

- Goldemberg, J. (1996). Energy, Environment, and Development. London, Earthscan: 11–37.
- Barnes, D. and M. A. Toman (2004). Energy, Equity and Economic Development. New York, Columbia University, Initiative for Policy Dialogue.

6) September 22:

Traditional biomass and hydropower

- Leach, G. (1992). “The Energy Transition.” Energy Policy 20(2): 116-123.
- Xiaohua, W. and F. Zhenmin (2001). “Rural household energy consumption with the economic development in China: stages and characteristic indices.” Energy Policy 29(15): 1391-1397.
- WCD (2000). Executive Summary. Dams and Development: A New Framework for Decision-Making. South Africa, World Commission on Dams.

optional:

- Cullenward, D. and D. Victor (2006). “The Dam Debate and its Discontents.” Climatic Change 75(1): 81-86.

Problem set #1 due

7) September 24:**Fossil fuels: coal and gas**

- MIT (2007). *The Future of Coal: options for a carbon constrained world*. Cambridge, MA, Massachusetts Institute of Technology. *read pp ix–xv, 1–41, 95–105*.
- Tussing, A. R. and B. Tippee (1995). *The Natural Gas Industry: Evolution, Structure, and Economics*, PennWell Books, pp1–23.
- Bohannon, J. (2008). “Weighing the Climate Risks of an Untapped Fossil Fuel.” *Science* 319(5871): 1753.

optional:

- Chick, Ch. 3
- Victor, D., A. M. Jaffe, et al. (2006). *Natural Gas and Geopolitics: From 1970 to 2040*, Cambridge University Press, [Ch 1 and Ch 14]

8) September 29:**EAP Tools 3: Power plant operation and efficiency**

- Rubin, 5.1–5.4
- Randolph, J. and G. M. Masters (2008). *Energy for sustainability: technology, planning, policy*. Washington, Island Press. [pp 364–374]

*Problem set #2 handed out***9) October 1:****Power Plant tour**

West Campus Co-generation Facility

- *Logistical details available on Learn@UW*
- WCCF Technical fact sheet
- WCCF Air quality fact sheet

10) October 6:**EAP Tools 4: Life cycle analysis**

- Rubin, Ch. 7
- Fthenakis, V. M. and H. C. Kim (2007). “Greenhouse-gas emissions from solar electric- and nuclear power: A life-cycle study.” *Energy Policy*.
- The Economic Input-Output Life Cycle Assessment tool <http://www.eiolca.net/>

optional:

- Hendrickson, C., A. Horvath, et al. (1998). “Economic input-output models for environmental life-cycle assessment.” *Environmental Science & Technology* 32(7): 184A-191A.

- Bergerson, J. and L. Lave (2007). “The long-term life cycle private and external costs of high coal usage in the US.” *Energy Policy* 35(12): 6225-6234.

11) October 8:

EAP Tools 5: Engineering economics for policy analysis

- Rubin, Ch. 13
- Chick, Ch. 4

optional:

- Anderson, D. (2006). *Costs and Finance of Abating Carbon Emissions in the Energy Sector*. Cambridge, UK, A report prepared for the HM Treasury Stern Review on The economics of climate change.

Problem set #2 due

12) October 13:

Transmission and distribution

- Chick, Ch. 5
- Meier, S. v. (2006). *Electric Power Systems: A Conceptual Introduction*, Wiley: IEEE Press. [Ch 6]
- Fairley, P. (2001). “A Smarter Power Grid.” *Technology Review*: 41–49.
- Maris, E. (2008). “Energy: Upgrading the grid.” *Nature* 454: 570-573.

13) October 15:

The electricity industry, markets, and restructuring

- Chick, Ch. 6
- Joskow, P. (2000). *Deregulation and Regulatory Reform in the US Electric Power Sector*. Cambridge, MA, Massachusetts Institute of Technology, Center for Energy and Environmental Policy Research, pp 1–17.
- Borenstein, S. (2002). “The trouble with electricity markets: Understanding California’s restructuring disaster.” *Journal of Economic Perspectives* 16(1): 191-211.

optional:

- Dahl, C. (2004). *International Energy Markets: Understanding Pricing, Policies and Profits*, Pennwell Books. [Ch 4]

14) October 20:

Nuclear power

- Rubin 2.6, 5.6.1,

- Deutch, J., E. Moniz, et al. (2003). *The Future of Nuclear Power: An Interdisciplinary MIT Study*. Cambridge, MA, Massachusetts Institute for Technology. *Read summary*
- Peterson, P. F., W. E. Kastenberg, et al. (2006). “Nuclear waste and the distant future.” *Issues in Science and Technology* 22(4): 47-50.
- Deutch, J. M. and E. J. Moniz (2006). “The nuclear options.” *Scientific American* 295(3): 76-83.
- Goldemberg, J. (2007). “The limited appeal of nuclear energy.” *Scientific American* 297(1): 38-40.

optional:

- MIT Study, full report
- Tolley, G. S. and D. W. Jones (2004). *The Economic Future of Nuclear Power*, University of Chicago.

Problem set #3 handed out

15) October 22:

Wind power

- Rubin 5.6.5
- Wiser, R. and M. Bolinger (2009). 2008 Wind Technologies Market Report. Berkeley, CA, Lawrence Berkeley National Laboratory.
- Lewis, J. I. and R. H. Wiser (2007). “Fostering a renewable energy technology industry: An international comparison of wind industry policy support mechanisms.” *Energy Policy* 35(3): 1844-1857.

optional:

- Nemet, G. F. (2009). “Demand-pull, technology-push, and government-led incentives for non-incremental technical change.” *Research Policy* 38(5): 700-709.
- Lu, X., M. B. McElroy, et al. (2009). “Global potential for wind-generated electricity.” *Proceedings of the National Academy of Sciences* 106(27): 10933-10938.

16) October 27:

Solar power

- Rubin 5.6.7
- Lewis, N. S. (2007). “Toward Cost-Effective Solar Energy Use.” *Science* 315(5813): 798-801.
- Zweibel, K., J. Mason, et al. (2008). “A Solar Grand Plan.” *Scientific American*(January): 64–73.
- Wiser, R., G. Barbose, et al. (2009). *Tracking the sun: The installed cost of Photovoltaics from 1998–2007*, Lawrence Berkeley National Laboratory.

optional:

- Nemet, G. F. (2006). “Beyond the learning curve: factors influencing cost reductions in photovoltaics.” *Energy Policy* 34(17): 3218-3232.
- Borenstein, S. (2008). *The Market Value and Cost of Solar Photovoltaic Electricity Production*. Berkeley, CA, University of California Energy Institute’s Center for the Study of Energy Markets.
- Brightsource (2008). “PG&E Signs Contracts With Brightsource Energy For Up To 900 Megawatts Of Solar Thermal Power.”
- Butler, D. (2008). “Thin films: ready for their close-up?” *Nature* 454: 558-559.

Problem set #3 due

17) October 29:

Mobility and transportation energy

- Schafer, A. and D. G. Victor (2000). “The future mobility of the world population.” *Transportation Research Part A: Policy and Practice* 34(3): 171-205.
- Rubin Ch 3
- Yergin, D. (1991). *The Prize: The Epic Quest for Oil, Money, and Power*. New York, Simon and Schuster. [prologue]
- Davis, S., S. Diegel, et al. (2008). *Transportation Energy Data Book*. Oak Ridge, TN, U.S. Department of Energy. (*browse*)

optional:

- Greene, D. L. (1998). “Why CAFE worked.” *Energy Policy* 26(8): 595-613.
- Simmons, M. R. (2007). *Another Nail in the Coffin of the Case Against Peak Oil*.
- Schaeffer, A. (2007). “Long-Term Trends in Global Passenger Mobility.” *The Bridge* 36(4).

18) November 3:

MIDTERM EXAM

19) November 5:

Biofuels and lifecycle analysis, Guest lecture: Dr. Paul Meier

- Hill, J., E. Nelson, et al. (2006). “Environmental, economic, and energetic costs and benefits of biodiesel and ethanol biofuels.” *Proceedings of the National Academy of Sciences of the United States of America* 103(30): 11206-11210.
- Farrell, A. and M. O’Hare (2008). *Greenhouse gas (GHG) emissions from indirect land use change (LUC)*. Berkeley, CA, University of California.

20) November 10**EAP Tools 6: Resource depletion, Hubbert and Hotelling**

- Hubbert, M. K. (1949). “Energy from Fossil Fuels.” *Science* 109(2823): 103-109.
- Ahlbrandt, T. (2002). “Future Petroleum Energy Resources of the World.” *International Geology Review* 44(12): 1092 - 1104.
- Farrell, A. E. and A. R. Brandt (2006). “Risks of the oil transition.” *Environmental Research Letters* 1(1): 014004.
- Kerr, R. A. (2009). “How Much Coal Remains?” *Science* 323(5920): 1420-1421.

optional:

- Devarajan, S. and A. C. Fisher (1981). “Hotelling’s ‘Economics of Exhaustible Resources’: Fifty Years Later.” *Journal of Economic Literature* 19(1): 65-73.

21) November 12:**Storage: Batteries, PHEVs, H₂, and fuel cells**

- Sperling, D. and D. Gordon (2008). “Advanced Passenger Transport Technologies.” *Annual Review of Environment and Resources* 33(1): 63.
- Romm, J. (2004). “The Hype about Hydrogen.” *Issues in Science and Technology*.
- Sperling, D. and J. Ogden (2004). “The Hope for Hydrogen.” *Issues in Science and Technology*.

optional:
